OLIVE OIL FFA, PV & UV REPORT

To: Stathi Martinis
 Kalamata Food Purveyors
 4061 E. Castro Valley Blvd., #500
 Castro Valley, CA 94552

Date: July 29, 2010
Lab #: 04054-2
Received: July 22, 2010
Tech(s): S. Santos
Lab Supervisor: D. Jacobson
Lab Director: G.S. Conrad, Ph.D.
Sample ID(s): LVOO2/CV
Expiration Date: (none)

Brand: Lykovouno Olive Oil
Source/Origin: Greece
Lot No: (none)

Site Location: from operations at address as listed above.

RESULTS

SAMPLE ID	Titratable Acidity	Peroxide Value	UV Absorbency	COOC			IOOC		
				FFA	PV	UV	FFA	PV	UV
LVOO2/CV	0.35%	4.50 meq/kg	0.21	√	√	√	√	√	√

√ means the sample passed (no check means it failed)

COMMENTS

The acidity (as free fatty acids) of the submitted olive oil sample was titrated at <0.4% which is under the established 0.5% limit for California. In addition, PV (peroxide value) also measured well below its limit of 20 meq/kg, meaning that this parameter also satisfies its requirement. And the UV Absorbency was under the established California limit of 0.22 Absorbance Units, thus this parameter is acceptable as well. Therefore, all the three parameters satisfy the requirement for an extra virgin rating. But keep in mind that other parameters are also important in rating olive oils, not the least of which are organoleptic test results.

TEST NOTES:

Methods according to Official Methods of Analysis, 15th ed., © 1990 by the Association of Official Analytical Chemists: 940.28 - dissolution in ethanol and titration of acidity by 0.1N NaOH (sodium hydroxide) and reported as oleic acid equivalent; and 965.33 - titrated in KI with sodium thiosulfate.
